Importing Existing Passwords

Native browser password stores are NOT secure and shouldn't be used. Bitwarden supports importing them

You may see a popup like below where you can quickly begin the import process

The image shows a Bitwarden 'Get started with your vault' popup. It has a dark blue background and a light blue header. The header contains a shield icon, the text 'Get started with your vault', and a progress indicator '2 of 3 complete'. Below the header, there are three steps: 'Create your account' (marked 'Completed'), 'Import your passwords' (with a blue 'Import passwords' button), and 'Install the browser extension' (marked 'Completed').

Get started with your vault 2 of 3 complete

Complete these steps to secure your personal data and get the most out of Bitwarden

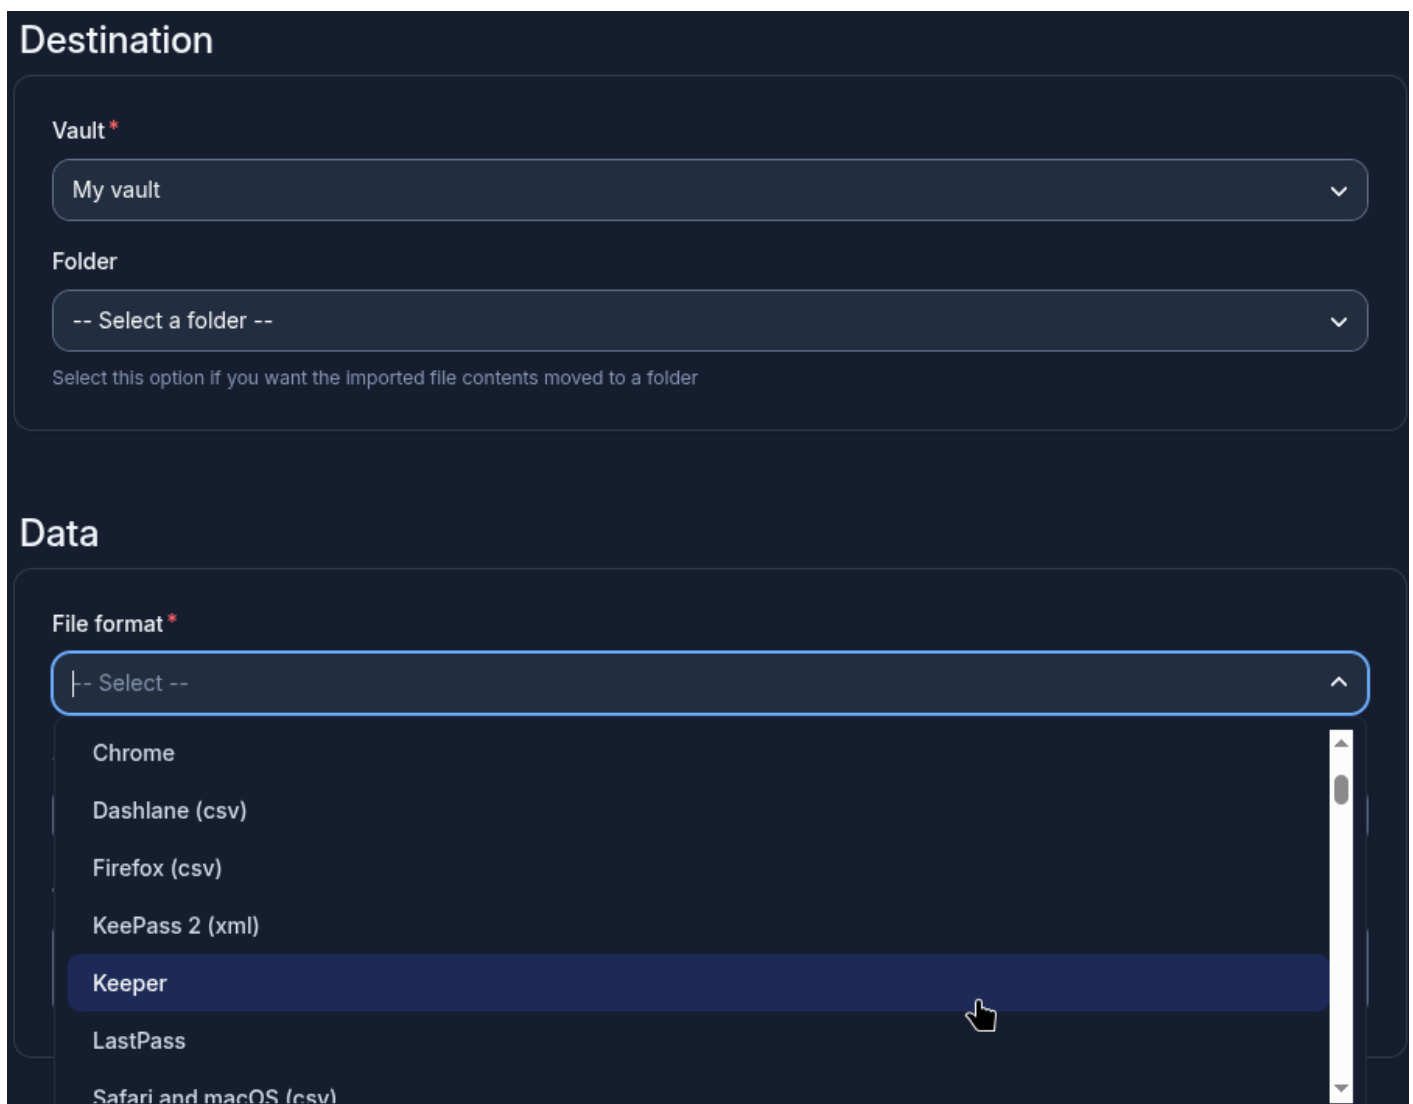

Create your account Completed

Import your passwords Import passwords
Save time by importing data from another password manager. You can manually add items to your vault.

Install the browser extension Completed

Otherwise you can find the Import utility by clicking on Tools -> Import.

Select the File format for the browser/app you wish to import data from

The image shows two screenshots of the Bitwarden import utility. The top screenshot is the 'Destination' screen, which has a dark blue background and a light blue header. It contains two dropdown menus: 'Vault' (set to 'My vault') and 'Folder' (set to '-- Select a folder --'). Below the 'Folder' dropdown is a note: 'Select this option if you want the imported file contents moved to a folder'. The bottom screenshot is the 'Data' screen, which also has a dark blue background and a light blue header. It contains a dropdown menu for 'File format' (set to '-- Select --'). Below the dropdown is a list of file formats: 'Chrome', 'Dashlane (csv)', 'Firefox (csv)', 'KeePass 2 (xml)', 'Keeper' (highlighted), 'LastPass', and 'Safari and macOS (csv)'. A mouse cursor is pointing at the 'Keeper' option.

Select this option if you want the imported file contents moved to a folder

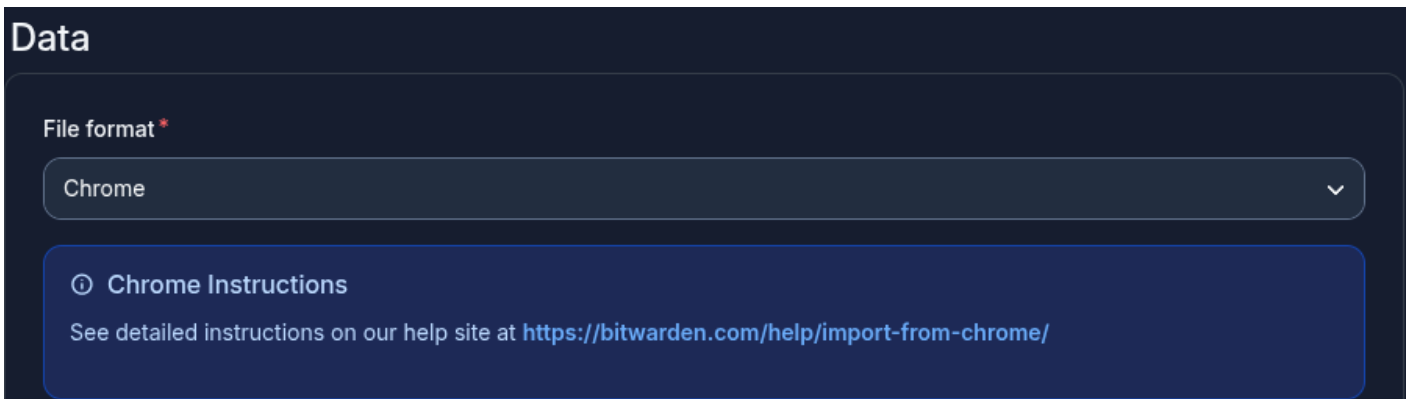

Data

File format *

-- Select --

- Chrome
- Dashlane (csv)
- Firefox (csv)
- KeePass 2 (xml)
- Keeper**
- LastPass
- Safari and macOS (csv)

Once a File format is selected, Bitwarden will provide instructions on how to export the data. Follow them, and select the exported file

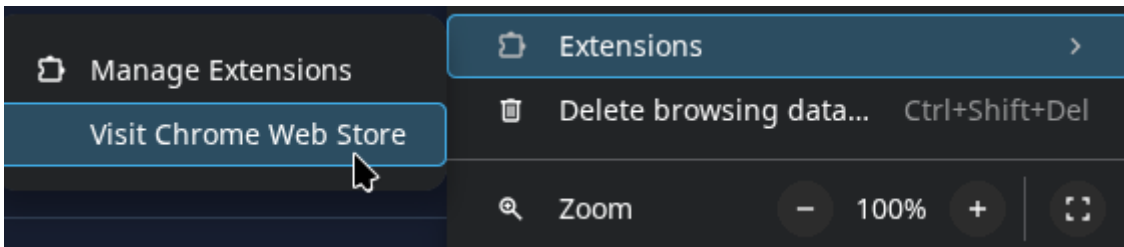

Setting up the Browser Extension

Bitwarden ships a browser extension for all major browsers. The extension carries the benefit of offline access to your password, and auto-completion of login prompts.

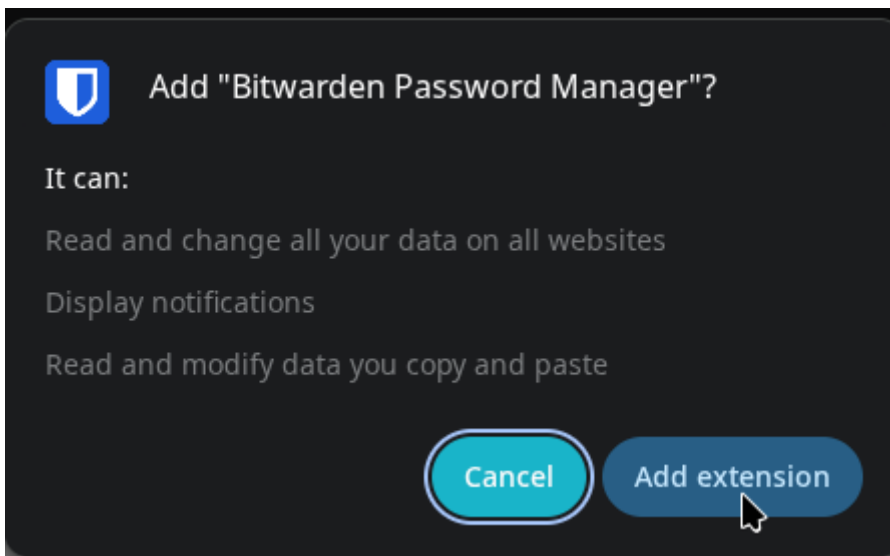

The Getting started popup will offer a link to install the Bitwarden browser extension

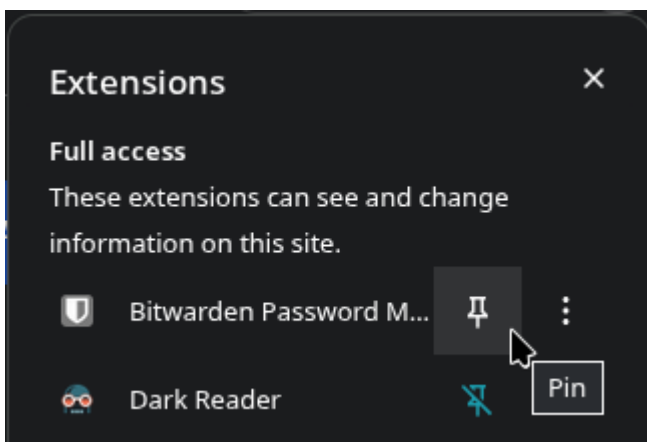

You may also visit your browser's extension store directly and search for Bitwarden

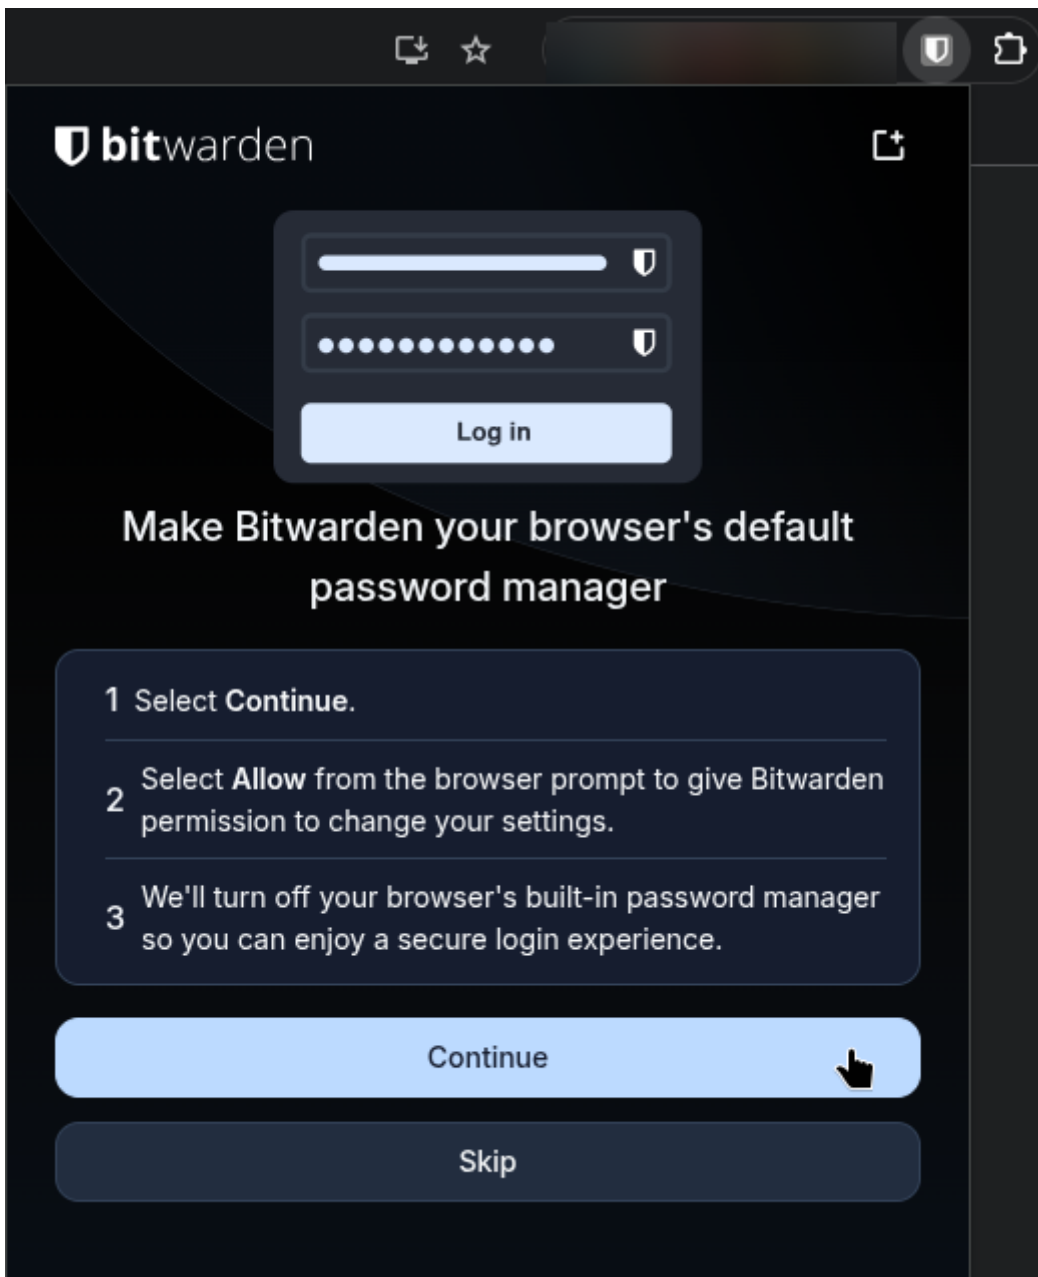

Install and confirm if prompted

When complete, you should see "Bitwarden..." in the browser toolbar. If it is not visible, you can find it in the extension list and pin it.

Open the Bitwarden browser extension by clicking the icon in the toolbar. If prompted to make Bitwarden the default password manager, click "Continue"

On the next screen, click "Log in"

Security, prioritized

Save logins, cards, and identities to your secure vault.
Bitwarden uses zero-knowledge, end-to-end encryption
to protect what's important to you.

Create account

Log in

At the bottom of the popup, click on "Accessing: bitwarden.com" and select "self-hosted"

self-hosted

New to Bitwarden

Accessing: bitwarden.com

Input <https://warden.firehawk-systems.com> and press "Save"

Self-hosted environment

Server URL

https://warden.firehawk-systems.com

Specify the base URL of your on-premises hosted Bitwarden installation.
Example: https://bitwarden.company.com

> Custom environment

Save

Cancel

With the field changing to "Accessing: self-hosted", you can now login with your email and password

Setting up Mobile App

Visit <https://bitwarden.com/download/> on your mobile device to find the Bitwarden app.

This process is very similar to "Setting up the Browser Extension". Once the self-hosted URL is entered, you can login

You have completed the Bitwarden Account Setup

Passwords, notes, TFA, and files will be synchronized between devices logged into the same account, and both the Bitwarden app and browser extension provide offline access to your vaults.

Visit: for steps to secure your Bitwarden vault. You will not be given full access to Bitwarden resources until you follow those steps
