

Setting up Two-Factor Authentication

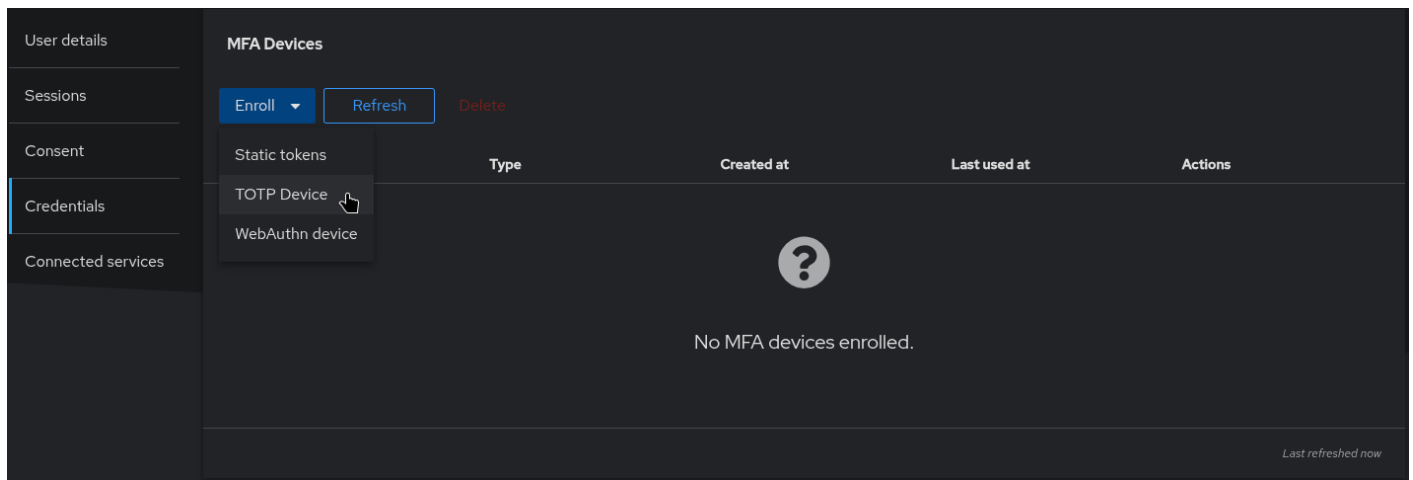

Setting up TFA on your Firehawk-Systems account is **STRONGLY** recommended, and in some cases may be required

Log in into your Authentik account as created in <https://knowledge.firehawk-systems.com/books/managing-your-account/page/requesting-an-account>

Click on the settings icon in the top-right and navigate to Credentials.

Click on Enroll. If you have a YubiKey and know how to use, select "WebAuthn device". Otherwise, select "TOTP Device"

As the instructions on the page suggest, scan the QR code with any Authenticator App that supports TFA/TOTP. Our recommendation is the Bitwarden App. See here for setting up a account:

<https://knowledge.firehawk-systems.com/books/bitwarden/page/account-setup>

When the code has been scanned, your app will generate a 6-digit code which you should enter and click "Continue"

FIREHAWK SYSTEMS

Set up Two-Factor authentication

MU myuser

[Not you?](#)

 Copy TOTP Config

 Copy Secret

Please scan the QR code above using the Microsoft Authenticator, Google Authenticator, or other authenticator apps on your device, and enter the code the device displays below to finish setting up the MFA device.

TOTP Code *

Type your TOTP code...

Continue

If successful, you will be returned to the Settings page

You have completed your Two-Factor Authentication setup
